

AIR2G2® ACQUIRED BY THE FOLEY COMPANY

2021

Dear Valued Sustainable Machinery Customers of Australia and New Zealand,

Foley Company is pleased to announce the assignment of Sustainable Machinery PTY Ltd as the distributor of Air2G2®, a product group acquired by the Foley Company in November 2020.

Air2G2® is a decompaction machine that has won two Innovation of the Year Awards, one with the Sports Turf Managers Association (STMA) in 2015, and the other with the HSBC Golf Business Forum in 2016.

New to the industry in 2012, years of development and testing proved that laterally injecting air pressure up to 6 and 12-inches beneath the soil surface not only relieved compaction, increased porosity, and enhanced respiration, but it did so immediately with minimal disruption to the turf surface or to the root systems below.

Since its introduction into the Australasian turf industry, the Air2G2® has gained traction delivering the truest form of compatible “aerate and play technology” to all sports codes, globally. The Air2G2® delivers multiple advantages for the soil by fracturing the growing medium and pushing adjustable controlled air throughout the soil profile. This “breathes” new life into the soil supporting conditions for healthier roots to develop while encouraging the presence of positive microbial activity in the subsurface.

For enquiries regarding the AIR2G2® technology:
